

TIPS

FOR FITTING CLOTH NAPPIES

perfectly

Ensure the nappy is firm but not tight. You should always be able to get two fingers under the waist band once done up. The fit around the baby's leg should be snug (with no gaps) to prevent any leaks.

Ensure an even rise around the waist. The nappy should not be noticeably higher at the front or back.

Ensure the leg elastics sit in crease of legs where they join body, not part way down the thigh.

Ensure that all inner absorbent material is tucked inside the waterproof outer.
